CURVED FENCE RAIL

Two measurements are required to determine the inside radius of curved deck railing or fence.

A Width of Bend:

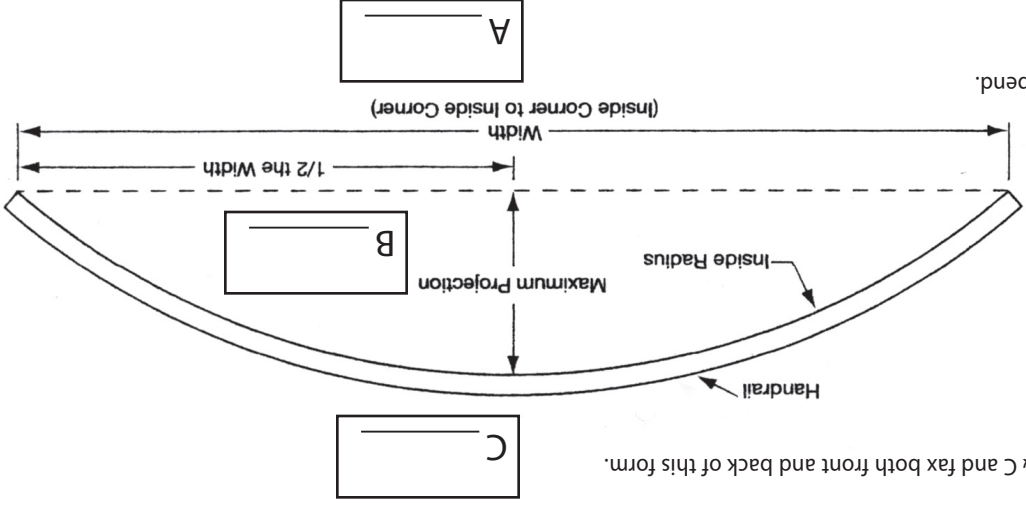

Measure straight across from inside corners of the area where the bend will be placed: post to post, the edges of a deck, etc.

B Maximum Projection of Bend:

Measure in a straight line across the width, find the center of the width (1/2 of the width).

Measure to the inside of the arc from the center of the width.

C Also provide the total number of sections needed within the bend.

END POSTS - Routed on only one side. The other 3 sides are blank. Use this post when you will be finishing a line of fence or putting a gate in the middle of a section.

LINE POSTS - Routed on opposite sides. Use this post between sections in a straight or slightly curving fence line.

CORNER POSTS - Routed on adjacent sides and should be used when you want make 90° angle with your fence.

3 WAY POSTS - Routed on 3 sides. Use this when forming a "T" with your fence line.

BLANK POSTS - Routed. Use them when your putting a gate right next to your home or garage. You can use the blank post as a latching post, when you don't want to latch directly to the side of a building.

LINE POSTS -Routed on opposite sides. Use this post between sections in a straight or slightly curving fence line.

CORNER POSTS - Routed on adjacent sides and should be used when you want make 90° angle with your fence.

3 WAY POSTS - Routed on 3 sides. Use this when forming a "T" with your fence line.

BLANK POSTS - NOT routed. Use them when your putting a gate right next to your home or garage. Use the blank post as a latching post, when you don't want to latch directly to the side of a building.
